

# Breeze **PRO** User Manual

# Introduction to Breeze Pro

Breeze Pro is a wind, rain, and sunlight sensor. It captures this data and transmits it to Bond Bridge Pro using proprietary RF technology. Screens, shades and louver motors are also paired to the Bond Bridge Pro and are triggered when user-defined thresholds are met.

## Safety

**⚠ Please read the following important safety information before using this device.**

The BWS-1000 is not designed as a security or safety device and is primarily intended for end-user convenience. The BWS-1000 must not be used in applications where a malfunction could endanger life or property.

# Power

Breeze Pro's primary power sources are its solar panel and supercapacitor. The 2xAA batteries are a backup for when solar energy is not available.

A +12VDC Cable  
Connection  
(polarity insensitive)

2xAA batteries  
compartment

**The +12VDC plug powers a heater designed to melt snow or ice that builds up on the sensor which otherwise would cause incorrect wind readings.**

When powered, the blue LED indicator will flash every 10 seconds, signaling Breeze Pro is transmitting a signal.

# Linking Breeze Pro

Before linking Breeze Pro to your Bond Bridge Pro make sure you have downloaded the Bond Home app, and set up a Bond Bridge Pro on your account.

## Download the Bond Home app:

*You can also use the QR Code in the packaging.*

Now that you added your Bond Bridge Pro, you are ready to install Breeze Pro.

## Pairing with a QR Code

1. Open the Bond Home app
2. Press **+**
3. Press "Scan QR Code" on the bottom-right
4. Scan the QR Code placed in the rubber band

## Pairing using the CAL button

1. Open the Bond Home app
2. Press **+**
3. Scroll down to Accessories
4. Select Breeze Pro
5. Follow the setup instructions

*Once the pairing window opens make sure you press and release the CAL button on the Breeze Pro within 60 seconds.*

# Set thresholds and link devices

Before Breeze Pro can automatically control your devices, you'll need to set thresholds and link those devices in the Bond Home app.

1. Open Breeze Pro in the My Devices dashboard.
2. Scroll down and tap "Set thresholds"
3. You can choose to enable Wind, Rain, and/or Sun detection.
4. Set an appropriate threshold for windspeed and sun level as needed.
5. Choose the devices which should be triggered for each type of event.

## Event Priorities: Wind > Rain > Sun

If Breeze Pro triggers for high wind, it will ignore rain and sun events until the wind subsides. Similarly, if triggered for rain, it will ignore sun events until the rain stops.

# Mounting

Breeze Pro is designed to be fixed on a 1"OD (2.54mm) pole. When mounting, ensure that it's pointing north (using the north indicator) and it's mounted vertically. Using a level is recommended.

For accurate measurement of wind speed, please comply with the clearances specified below. If these clearances are violated, the wind measurements may be significantly lower than the actual wind speed causing your thresholds not to trigger when you want them to.

<b>A</b>	Recommended clearance from the ground.	13ft (4m)
<b>B</b>	Recommended clearance from roofs and parallel surfaces.	3ft (1m)
<b>C</b>	Recommended clearance radius from near objects and trees	10ft (3m)

## Legal

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by Olibra could void the user's authority to operate the equipment.
