JUKE
AUDIO

Quick Installation Guide

1 **Download the App**

Available in the Apple app store and Google play store under Juke Audio

[Download on the App Store] [GET IT ON Google Play]

2 **Connect Juke to the network that your device is on**

Ethernet (optimal method): Plug Juke directly into the LAN port on your router.

Note: If you have both a router and mesh Wi-Fi, you need to configure one to bridge mode. Typically you can do this in your mesh Wi-Fi App.

Wi-Fi: Follow the on-screen prompts within the app to merge Juke onto your local network.

Note: If connecting via Wi-Fi, Juke will need to be with 12ft of your router and the Juke+ will need to be within 40ft of your router.
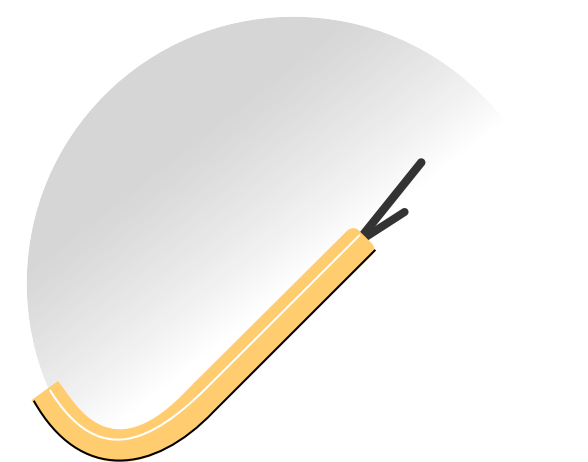

3 **Connect the Speaker Wiring**

If using two conductor wire: **+** **-** **+** **-**

If using four conductor wire: **+** **-** **+** **-** If getting no connection detected, try different permutations.

Note: Use the zone diagnostics in the Juke administrator settings to check speakers connections.

4 **Configure your Device (Password is Admin with a capital A)**

Name each of your zones based on which speakers you wired into which zone.

Set your presets for multi-zone sources or other audio source types.

Stream via Airplay 2 or Spotify Connect with each room name displayed independently.
